

Environmental Management

Advantages

- Facilitates the establishment of a model of relationships between processes, environmental issues, environmental impacts, controls, etc.
- Flexibility in the setting of criteria for assessing environmental issues or impacts.
- Guarantees that the assessments performed will be approved by the persons appointed for approval.
- Highlights environmental issues considered significant.
- Enables communication between the persons in charge of performing the assessment.

General Functionalities

- Recording an environmental management model that includes physical centers, processes, activities, environmental issues and impacts and controls.
- Establishing groups for assessment of environmental issues/impacts (air emissions, liquid effluents, soil contamination, noise pollution, etc.).
- Setting criteria for assessment of environmental issues/impacts (magnitude, frequency, impact, probability, scope, nature, etc.).
- Establishing rating scales for assessment of environmental issues according to criteria set by the user.
- Establishing equations for calculating significance based on the assessment criteria set.
- Traffic-light system for major environmental issues according to significance thresholds set by the user.
- Implementation of the Environmental Management Program.
